Meeting Notes - Lab 3 Part 2

- 2/2/2024
  - We once again discussed how we were going to split up the workload:
    - Wendy - Moving average algorithm and evaluation metrics
    - Lorenzo - LSTM algorithm and evaluation metrics
    - Jade - Mock trading environment and algorithm integrations
- 2/5/2024
  - This day we didn't have class but were able to meet up on zoom and discuss the progress over the weekend. We were able to do the following
    - Get the moving average algorithm running
    - Progress on the trading environment with regards to fund allocation
    - Progress on the LSTM algorithm for integration
  - This day was mostly dedicated to working on our own as we needed to get the fundamental algorithms working with the data we collected from selected stocks
  - We needed to also figure out general how mock trading worked by reading the selected articles in more depth.
- 2/6/2024
  - For the final day it consisted of touch ups and integration. We needed to make sure the mock trading environment was suited for the two algorithms that were created.
    - Integrated all of the code from each team member
    - Wrote documentation on how to run code
    - Finished meeting notes
